

Abstract of Presentation

Dr. Lars Börger, Neste Germany GmbH
Renewable Materials Conference 2021

Title:

Change runs on renewables - how Neste closes gaps with existing and new renewable carbon sources

Abstract:

The race to mitigate climate change impacts is accelerating year by year, and yet there are multiple gaps to be closed. That is the emission gap between the predicted trajectories for energy and fossil usage globally, there is the gap between political targets and tangible actions with regards to Bioeconomy and there is the gap to close circles in relevant value chains in the materials space. In the presentation the approaches to close these gaps by bringing applying short-, mid- and long-term renewable and recycled solutions into action are shown. Latest development on making renewable carbon from the biosphere, the technosphere and the atmosphere available for the industrial transformation will be presented. Or as Neste says: Change runs on renewables.
