

How did the COVID-19 pandemic affect the commercialization and developments of several renewable chemical building blocks including the growing use of polyolefins and aromatics from bio-naphtha and CO<sub>2</sub>-based feedstock? What is the current market status for several bio-based diacids and diols including monomers for biodegradable plastics such as PBS and PBAT? This presentation will also note a list of new industrial biotechnology start-ups worldwide and plants and projects status involving renewable chemicals.
