A World Class Solution:

World's first at-scale producer of fossil-free plastics

- Save up to **6 kg** of CO₂ per kg of plastic
- Fully segregated and traceable
- Non-food feedstock, green methanol
- **Drop-in quality** polypropylene and polyethylene both easily recyclable
- All technologies proven at scale

Vioneo at a glance

- Vioneo will be the world's first large-scale producer of fossil-free plastics based on green methanol.
- The initial plant will be in Antwerp, Belgium, Europe's largest integrated chemicals cluster.
- The plant will produce ca 300.000 tonnes of fossil-free plastics, cutting at least 1.5 million tons of CO₂ emissions annually, marking a major advance in defossilising the €5 trillion global chemicals and materials sector.
- The first production complex represents a €1.5 billion investment with final investment decision (FID) possible in 2025.
- The initiative has the potential to revitalize the European chemicals sector and position Europe as a leader in defossilising the industry.
- Strong ownership by AP Moller Holding with 120 years of experience and ~32 billion USD net asset value.

Strategic location at the heart of Europe

Unlocking the green methanol route to plastic

A world's first new-built polymer plant running on renewable electricity and green methanol feedstock
